Roadlog users may also access an electronic version of the Roadlog using the Roadlog Oracle Form to query the most current available data. The Electronic version contains additional roadway attributes and the user may also plot detailed queries with the click of a button. The electronic version also includes 57,000 miles of Montana's "off-system" routes.

EXPLANATION OF ROADLOG LISTINGS

SECTION DESCRIPTION	SYS	REF MARKER	SECTION LENGTH	ACCUM MILE	FC	YEAR RECONSTR/IMPROV		LAST PROJECT	SURF TYPE	WIDTH SURF	WIDTH LANE	WIDTH SHLDR	THICKNESS SURF	THICKNESS BASE	LANES	FD	AD	MS	LOCATION
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

1. **Section Description** – Identifies junction of the route with jurisdictional boundaries (i.e. National Forests, Indian reservations, cities, counties) and other routes. Also identifies typical and project changes.

2. **System** – Identifies a route based on a system classification as specified in State and Federal law. These include:
   - NHS -- National Highway System
   - PRI -- Primary System
   - SEC -- Secondary System
   - URB -- Urban System

3. **Reference Marker** – Reference number assigned to the beginning of the roadlog section. They represent the distance, in miles, from the last physical reference marker. Accumulative mileage, rather than reference markers, should be used to compute mileage between roadlog breaks due to the varying distance between consecutive reference markers.

4. **Section Lengths** – Length, in miles, of section between reference markers

5. **Accumulated Mileage** – Sum of accumulated section lengths from beginning of a corridor.

6. **Functional Class** – Process by which roads are grouped into classes according to the character of services they provide. These include:

Interstate	1
Principal Arterial	2
Minor Arterial	3
Major Collector/Urban Collector	4
Minor Collector (Rural Only)	5
Local Road	6

7. **Year Reconstructed** – Date of latest reconstruction or major widening.

8. **Year Improved** – Date of latest major surface improvement.

9. **Last Project** – Identifies the project under which section was significantly improved. Please note that ** denotes the Last Improvement Project ID is unknown and the Last Reconstruction Project ID is shown instead.

10. **Surface Type** – Identifies the surface type by codes as listed below:

PMS	Plant Mix Surfacing
RMS	Road Mix Surfacing
PCC	Portland Cement Concrete
GRV	Gravel
GRD	Graded
BLD	Bladed

11. **Surface With** – Width, in feet, of drivable surface. Includes seal and cover for paved surfaces.

12. **Lane Width** – Width, in feet, of each lane. This is a derived field using surface width and number of lanes. 12 feet is used as a standard width.

13. **Shoulder Width** – Width, in feet, of shoulder for each section of road (outside shoulder for Interstate). This is a derived field using surface width and number of lanes.

14. **Surface Thickness** – Compacted thickness, in inches, of paved surface as shown on contract plans.

15. **Base Thickness** – Average compacted thickness, in inches, of base as shown on contracted plans.

16. **Lanes** – Number of driving lanes.

17. **Financial District** – As defined by state law, there are five financial districts covering the state. They are coded as:

Missoula	1
Butte	2
Great Falls	3
Glendive	4
Billings	5

18. **Administrative District** – As defined by MDT, there are five districts coded as above.

19. **Maintenance Section** – Four digit code indicating MDT Maintenance Section responsible for maintaining a section of roadway.

20. **Location** – Identifies the location of a segment of roadway. Locations are prioritized in the following order: Cities, Urban Areas, Counties, National Forests, Indian Reservations, National Parks, National Game Refuge, and State Forests.
